SUMMARY

Full-stack software engineer building production web and mobile applications in React, TypeScript, Node.js, PostgreSQL, AWS, and React Native. Recent work includes the Hyundai USA test-drive platform and a nationwide inventory search for 300k+ vehicles and 800+ dealers. Previously Senior Instructor / Developer at LearningFuze — teaching React, Node, and PostgreSQL while shipping the school website, LMS, and curriculum.

SKILLS

Languages & frameworks: JavaScript, TypeScript, React, React Native (iOS & Android), Node.js, Express, PHP, HTML5, CSS3, REST APIs

Data & cloud: PostgreSQL, DynamoDB, AWS (S3, DynamoDB), Digital Ocean, GitHub Actions, Sequelize, MySQL, MongoDB

Also used: Python, Java, Go, C++, Vite, Tailwind CSS, Redux, MDX, Git

EXPERIENCE

Silicon Beach Solutions LLC — Project Lead Developer

June 2024 – August 2026

Newport Beach, CA · Contract

- Led maintenance, features, and technology updates for the Hyundai USA test-drive website (React, Redux, Node.js, Sequelize, PostgreSQL, AWS S3), including deployments, pre-live testing, and host transfers; provided architecture and data-flow oversight for the Evolve+ front-end aligned with existing mobile patterns.
- Designed and implemented a DynamoDB architecture for the nationwide Hyundai Build & Search Inventory application — 300k+ vehicles, 800+ dealers, sub-second radius/zip-code queries with the Java team; Blue/Green deploys for zero-downtime nightly updates; S3 import workflows that reduced inventory-update costs.
- Built and maintained Hyundai Drive on React Native (iOS & Android): driver's license verification on web and mobile, feature parity with the web app, PII removed from front-end data flow with back-end updates to handle sensitive data, and less Redux complexity by moving global state to local state.
- Led adoption of Cursor and AI-assisted workflows across the project team for Hyundai web and React Native development.

LearningFuze LLC — Senior Instructor / Developer

June 2019 – December 2025

Irvine, CA

- Ran LearningFuze.com: content, deployments, maintenance, and technology updates using AWS, PHP, Digital Ocean, GitHub Actions, and NPM.
- Taught React, Node.js/Express servers, PostgreSQL, and technical interview practice; project-managed student senior projects (features, database design, wireframes, issue tracking, code assistance).
- Shipped LMS updates for student assignments and profile navigation, including PostgreSQL migrations; helped migrate hosting from Heroku to Digital Ocean to reduce cost and kept the app up when issues hit.
- Wrote curriculum updates (React hooks, Express REST APIs, OS-level Node.js, unit tests, data structures) and built the Self-Paced Python course in MDX with dozens of exercises, plus local/deployed testing (responsive, multi-browser, functionality).

LearningFuze LLC — Assistant Instructor / Developer

June 2018 – June 2019

Irvine, CA

- Coached students on fundamentals (functions, readable code, comments, higher-order functions, pseudocode, website design) in 1:1 and group sessions; ran post-exercise Q&A in a simulated agile environment; implemented website and curriculum updates for senior instructors.

EDUCATION

B.S. Computer Science — Fort Hays State University, Kansas

Expected December 2027

Full-Stack Web Development Program — LearningFuze, Irvine, CA · 800+ hours (60+ hrs/week) in a simulated agile environment

2018
